Hempel A/S · Solutions Project Manager, Marine Solution Management · Kongens Lyngby

Application: Solutions Project Manager — Hempel

To the Director for Marine Solution Management

In Kongens Lyngby, nobody buys a coating. They buy a number that has to survive a charter party. A hull that stays clean across a docking interval, a fuel bill that falls, a CO_2 line in the annual report that moves in the right direction — and a ship manager who can defend all three to his own board. A solution is only a solution when that number still holds a year after we have left the vessel. That is the part of this role I know how to run.

37 — the number of projects I have carried at once. At Novo Nordisk I planned and delivered 37 concurrent CAPEX projects of DKK 2–10 million against one shared pool of 25 specialists and a fixed window calendar: detailed plans, timelines and budgets, re-forecast every month, with the date we promised the customer being the date the resources could actually carry. A solution portfolio is the same discipline with a different vocabulary — and the failure mode is identical: too many launches, one team, no decision about what waits.

0 — critical findings at customer acceptance. I have taken technical solutions into live environments through FAT/SAT, IQ/OQ/PQ and acceptance with the customer's own inspectors in the room, and I do not treat **testing, deployment and integration** as the last two weeks of a plan. A solution that has to work inside systems people already use is designed for the deployment from the beginning: what data it needs, who owns the interface, what happens on the day it does not start, and how it is rolled back.

11 — concurrent contracts under my own P&L. Since 2023 I have run my own company with full financial responsibility: quotes, terms, margins, supplier agreements and 11 subcontracts in parallel. That is where I learned to be the **primary point of contact** for an **external customer** who has paid for something and expects it on a date — including the conversation where the answer is no. **Budgets** are not reporting to me; they are the constraint that decides the solution.

40 % — the productivity improvement from moving reporting out of spreadsheets. Tracking KPIs only changes behaviour when the number sits where people work. I built capacity, cost and utilisation reporting in **SAP ERP**, **Power BI** and **Python** so that project success and solution effectiveness could be read in the same place as the delivery, and I have used that reporting as the argument for stopping things as well as starting them.

5, 12, 14, 25 — the teams I have led. Alignment across **cross-functional** teams is rarely a communications problem; it is a decision-rights problem. I run it with one plan, one message and a decision log — who decided what, when, and what it costs if we change it — which is also how I keep technical teams, sales, service and **senior management** in the same conversation without three versions of the truth.

20+ — the years behind the method, and the reason a one-year contract does not worry me. A fixed term is a mandate with a beginning, a middle and an end, and I have delivered to that shape my whole career: scope agreed, baseline set, risks owned, adoption measured, handover documented. I am based in Måløv, half an hour from Kongens Lyngby, and I work in **English** daily — with customers, suppliers and colleagues who do not share my first language.

The customer's number is the deliverable. Hempel sells the effect of a coating, not the coating — fuel saved, emissions avoided, an asset that lasts longer. The project manager's job is to make that effect deliverable: requirements that can be built, a plan that can be held, a deployment that can be supported, and a number the customer can take to his own board. Hempel's growth in Marine has come from exactly that argument, and it is the argument I want to spend the next year making on the inside.

Why this role, and why a fixed term. I have built the same machinery three times — in a 24/7 plant, in a pharma portfolio and in my own company: define the effect, agree the baseline, own the risks, measure it where people work. A one-year contract at Hempel is a chance to do that where the solutions already exist and the task is to land them with customers and colleagues. I would rather have twelve months of delivery than thirty-six months of positioning.

What I would want to understand first is where the solutions portfolio hurts today: which initiatives are late, which ones the sales teams cannot explain to a customer, and how **Marine Performance Advisory** and **Services** receive a solution after launch. That is where I would start, and it is what I would like to be measured on after twelve months.

Kind regards

Shahram Ajloo

Solutions Project Manager · Marine solutions, delivery and measurable effect

+45 93 99 95 14 · ajlooshahram@gmail.com · linkedin.com/in/shahramajloo · Måløv

PROFILE

Project manager with 20+ years in delivery, production and contracting — **authorised marine engineer (LV/MV/HV)** and **full P&L responsibility since 2023**. Has carried **37 concurrent CAPEX projects** of DKK 2–10 million with 25 specialists to customer acceptance with **zero critical findings**, coordinated **11 concurrent contracts**, and built KPI reporting in **SAP ERP**, **Power BI** and **Python** with **over 40 % productivity improvement**.

PLANS, BUDGETS AND DELIVERY

- **Project plans, timelines and budgets:** 37 concurrent projects planned against one capacity pool and a fixed window calendar; monthly re-forecast, cost at completion and a decision log that shows what a change costs.
- **Plan, execute, monitor, close:** Every project opened with scope, acceptance criteria and a baseline, and closed with a documented handover — not with a meeting that ends when the budget does.
- **Risk and mitigation:** Risk registers with owner, date and cost estimate, reviewed monthly with the customer; opportunities priced with the same discipline as threats.

SOLUTIONS, TESTING AND INTEGRATION

- **Testing, deployment and integration:** FAT/SAT, IQ/OQ/PQ and acceptance into live GMP/FDA/EMA environments; interfaces, data and rollback defined before go-live, not after.
- **Quality assurance:** Delivery packages checked line by line against the specification; deviations contained, root-caused with A3 and closed — zero critical findings at acceptance.
- **KPIs and solution effectiveness:** Reporting built in SAP ERP, Power BI and Python: capacity, cost, utilisation and adoption in one view, used to decide what continues and what stops.

STAKEHOLDERS, CUSTOMERS AND IMPROVEMENT

- **External customers and partners:** Primary point of contact through the lifecycle: weekly site and commissioning calls, monthly steering with decisions logged, and one voice — including when the message is bad.
- **Cross-functional alignment:** Sales, engineering, procurement, service and management held to one baseline and one message; supplier lead times fed back into the plan instead of being found on site.
- **Continuous improvement:** Workflows, templates and reporting rebuilt from scratch in my own company; best practice written down as standard work so it survives the person who introduced it.

PROFESSIONAL EXPERIENCE

Owner / Technical Director — ELOHVAC ApS · Copenhagen · May 2023–present

Scope: 5 electricians + 3 apprentices · full P&L · service, production and small projects

- **Customers, contracts and margin:** Every delivery under own P&L — quotes and terms negotiated, 11 concurrent contracts and supplier agreements managed, reporting and follow-up built from scratch.

Senior Commissioning Engineer / Project Manager, Electrical Systems — Novo Nordisk A/S · Kalundborg · Nov 2022–Jul 2024

Scope: 37 concurrent CAPEX projects · 25 specialists · GMP/FDA/EMA

- **Portfolio, forecast and acceptance:** 37 projects of DKK 2–10 million against shared capacity and fixed windows; monthly re-forecast in SAP ERP; FAT/SAT, IQ/OQ/PQ and punch closure — zero critical findings.

Project and Workshop Manager — Ventek-Air · Copenhagen · Jan 2022–Nov 2022

Scope: 14 employees · 11 concurrent contracts · DKK 2–10 million

- **Delivery under pressure:** 11 concurrent jobs in a 14-person workshop; daily board meetings and weekly capacity adjustment against the delivery date.

Maintenance and Operations Manager — Lynetten under Biofos · Copenhagen · Aug 2017–Jan 2022

Scope: Critical plant in 24/7 operation · pumps, HVAC, HV switchgear, SCADA

- **Uptime, windows and safety:** Preventive maintenance inside production windows; emergency response around the clock, 5S, spare-parts flow, LOTO and APV.

Electromechanical / production team lead — ARJ Engineering · Tehran · Dec 2003–Mar 2010

Scope: 12 mechanics and technicians · machine workshop · industrial plant

- **Plan and output control:** 12 people planned against the weekly plan with materials and tooling; output measured per person and per machine.

EDUCATION AND AUTHORISATION

Authorised marine engineer — Danish LV/MV/HV authorisation · Danish Safety Technology Authority · May 2023

B.Tech, Technology Management and Mechanical Engineering (EQF 6) · Copenhagen School of Marine Engineering & Technology Management · 2017–2022 · GPA 7.6/12

Electrical and Mechanical Design, Electrical Engineering (EQF 6) · Tehran Technical University · 2000–2003

Lean: 5S, PDCA, VSM, A3, standard work · Refrigeration and HVAC (AMU) · Mercantec · 2021 · applied in capacity control and follow-up

LANGUAGES, PRACTICALITIES AND REFERENCES

Danish: native · English: professional, written and spoken, working language in meetings, contracts and documentation · Persian: native · **Based in Måløv**, half an hour from Kongens Lyngby · Driving licence and car · Available at short notice · References on request.

THE FIRST 90 DAYS — PORTFOLIO, STAKEHOLDERS, MEASUREMENT

Period	What happens, and how it is measured
Weeks 1–2	Read the live solutions portfolio: scope, baseline, budget, owner and customer for each initiative. Meet Sales, R&D, Solutions Management, Product Management, Services, Commercial Excellence and Marine Performance Advisory; sit in on two customer conversations.
Day 30	One page per initiative: baseline date, cost at completion, top three risks with mitigation, open decisions and who owns them. Everything where the plan and the business case disagree is flagged to the Director, Marine Solution Management.
Day 60	Fixed rhythm: weekly delivery call across functions, monthly portfolio review with Sales and Services. KPI set agreed for solution effectiveness — adoption, time to value, cost against budget — and reporting placed where the teams already work.
Day 90	Two initiatives measurably closer to launch with acceptance criteria met; testing and deployment checklists in use; a documented handover path into Services and Marine Performance Advisory; lessons written down as best practice.

A SOLUTION IS JUDGED WHERE IT IS USED, NOT WHERE IT IS LAUNCHED

A launch is an internal event. Adoption is the only proof that the solution was needed. That is why I want the KPI defined before the build: what number should move, by how much, for which customer, and who looks at it every month. On a hull-performance solution the number is fuel and CO_2 and the interval between dockings; the discipline behind it — define the effect, instrument it, review it with the customer — is the same one I have used where capacity, cost and utilisation had to move in line with the **business objectives**.

THE HONEST PART — AND WHAT I BRING INSTEAD

I have not worked in **coatings** or in **marine** service, and I am not going to pretend that a docking interval means the same to me as it does to a fleet superintendent on day one. What I bring is the machinery around the domain: requirements taken from the people who own the problem, testing and integration into systems already in production, and one point of contact when the plan moves. The domain I learn the way I learned GMP — from the engineers, the data and the people who do it every day. Hempel sells into more than a hundred countries, so a solution that works in one market has to survive a **cross-cultural** handover in the next; that is why **English** is a working language for me, not a translation of Danish.

THE ONE-YEAR CLOCK IS AN ADVANTAGE, NOT A LIMIT

A fixed-term mandate removes the excuse of a slow start. I would spend the first month understanding the portfolio, the second making the plan honest, and the remaining ten delivering against it — with a handover that leaves the next person better equipped than I found the role. Twelve months is enough to change how a portfolio is run if the decisions are taken in the first quarter.

INFLUENCE WITHOUT A BOX ON THE ORG CHART

A solutions project manager rarely owns the people who have to deliver. Mine has been influence through the plan: a baseline that everyone has contributed to, a risk register with names in it, and a monthly review where the same numbers are shown to sales, technical teams and management — in a **global** organisation that shared view is the only way the same story reaches every market. When the numbers are shared, the conversation stops being about opinion — including the one about stopping a project nobody believes will land.

WHAT THE ROLE REQUIRES — WHAT I HAVE DELIVERED	
Requirement in the posting	Evidence
Developing and managing detailed project plans, timelines and budgets for solution delivery	37 concurrent CAPEX projects of DKK 2–10 million with monthly re-forecast, cost at completion and a decision log; budgets treated as the constraint, not the report.
Coordinating cross-functional teams to ensure alignment on project goals and deliverables	Sales, engineering, procurement, service and management held to one baseline and one message; weekly delivery call, monthly steering, decisions logged with an owner and a date.
Collaborating with internal stakeholders to define solution requirements and oversee implementation	Requirements taken from the people who own the problem, frozen against a specification, and delivery packages checked line by line before release.
Acting as the primary point of contact for external customers and partners during the project lifecycle	Primary customer contact through execution — weekly site and commissioning calls, monthly steering, one voice; partner and supplier management across 11 concurrent contracts.
Overseeing the testing, deployment and integration of solutions into existing systems	FAT/SAT, IQ/OQ/PQ and acceptance into live systems; interfaces, data and rollback defined before go-live, with the customer's own inspectors signing the protocol.
Ensuring quality assurance processes are followed throughout the project	Delivery packages checked against the specification, deviations contained and root-caused with A3, punch lists closed protocol by protocol — zero critical findings.
Tracking key performance indicators to measure project success and solution effectiveness	KPI reporting built in SAP ERP, Power BI and Python — capacity, cost, utilisation and adoption in one view, with over 40 % productivity improvement.
Identifying areas for improvement in solution delivery processes and implementing best practices	Workflows, templates and reporting rebuilt from scratch in my own company; improvements written as standard work so they outlive the person who introduced them.
Bachelor's degree in Business Administration, Project Management, Information Technology or a related field	B.Tech in Technology Management and Mechanical Engineering (EQF 6), electrical and mechanical design (EQF 6), and authorised marine engineer (LV/MV/HV).
5+ years of experience in project management, solution management or a related role	20+ years of project and delivery management — 37 concurrent projects, 11 concurrent contracts, and full P&L responsibility since 2023.
Strong analytical and problem-solving abilities to identify risks and implement mitigation strategies	Risk registers with owner, date and cost estimate; root-cause analysis with A3; monthly reviews where mitigation is a decision, not a description.
Proven ability to engage, influence and manage expectations of diverse stakeholders including technical teams, customers and senior management	Influence without formal ownership: shared baseline and shared numbers with technical teams, sales, service and senior management — including the conversation about stopping a project.
Excellent communication skills, tailoring messaging to various stakeholders	One plan for the team, one page for management, one voice for the customer — Danish and English, written and spoken.
Ability to plan, execute, monitor and close projects effectively	Projects opened with scope and acceptance criteria and closed with documented handover; acceptance protocols signed by the customer, not by us alone.
Adaptable, innovative and customer-focused in approach	Structure built from scratch in a new company, reporting automated in Power BI and Python, and the customer's number used as the definition of success.
Reporting to the Director for Marine Solution Management, working with Sales, R&D, Business Development, Solutions Management, Product Management, Services, Commercial Excellence and Marine Performance Advisory	Used to a matrix: reporting to a director while delivering with sales, engineering, procurement and service, and handing over to the team that has to run the solution afterwards.
One-year fixed-term contract in Kongens Lyngby, application and CV in English	Based in Måløv, half an hour from Kongens Lyngby; available at short notice; English working language with customers, suppliers and colleagues; a fixed term is a mandate with a deadline.

WHAT TWELVE MONTHS SHOULD LOOK LIKE FROM THE OUTSIDE

One portfolio with a baseline the business trusts. One KPI set that Sales can explain to a customer and Services can support after launch. One documented path from solution to service. If those three exist a year from now, the fixed term has done its job — and the team that stays has something to build on.
