13 November 2026

Hitachi Energy · Grid & Power Quality Solutions and Service, HBUEU · Ballerup, Denmark

Application: Engineering Manager, Project Management Engineering

You write that inclusion drives our culture of innovation and collaboration. In an engineering department spread across Vaasa, Västerås and Ballerup, inclusion is not a value statement — it is the only reason a lead engineer in one country knows what was decided in another country on Tuesday. Distance does not create that problem. Distance reveals it: two teams solve the same interface in two ways, the customer hears two answers, and the rework lands three weeks later in the bay where the panel was ordered to the wrong cable schedule.

Hitachi Energy is building the infrastructure of the energy transition — hydrogen, data centers and e-mobility — and this role does not design the substation. It makes sure the people who do can decide, in time, to the same standard, in three countries. That is the job I have done at a smaller scale: 25 specialists across 37 parallel capital projects, 14 technicians and fitters on 11 simultaneous site projects, 8 employees in my own company. The constraint was never knowledge. It was the decision nobody had been given the right to make.

Six lines I would be measured on: today, and in twelve months.

Decision rights. Today an interface question travels up until it meets someone willing to answer, and the answer stays in that head. In twelve months each lead engineer has a written map of what they decide alone, what they decide with a peer in another country, and what comes to me — with a name and a date on the ones that come to me. I have run that map on 37 projects.

Capacity. Today resource demand is described once someone is already overloaded. In twelve months there is a rolling twelve-month view per country and competence, so a lead engineer sees in March what the fourth quarter will ask for. The method is the one I used daily with 11 site projects and 14 people: capacity analysis in the morning, re-prioritisation the same day, one plan everyone can read.

One engineering standard. Today three countries have three good practices and one shared problem: each is locally right and collectively expensive. In twelve months one written standard for documentation and interface control covers all teams — built with the engineers, not sent to them, which is how 5S and standard work became real on a workshop floor and in a 24/7 plant.

Competence with a successor behind every key person. Today the department knows who is competent; it does not know who is next. In twelve months there is a competence matrix per team, a named successor for each critical role and a development plan per engineer — the tool I built for 12 technicians and 3 apprentices, where the point was that the work could continue without me.

Delivery quality, measured before the customer measures it. Today quality appears when a customer complains. In twelve months the department reports first-time-right and rework per project, and a lead engineer can show me the trend before I ask. I have delivered 37 capital projects with zero critical deviations at handover and cut energy consumption by over 40 per cent in a 24/7 plant — both came from measurement, not from effort.

What I do not have, said plainly. I have not designed an **AIS** or **GIS substation**, and I am not a substation engineer. What I have is a high-voltage background: authorised **LV/MV/HV** (Danish Safety Technology Authority, 2023), five years of **high voltage** switchgear and **switchgear** operations in a 24/7 plant, and twelve years in the **energy** sector. The technology I would learn from your lead engineers; the leadership of the engineers working on it is what I bring.

Your own words are why I am applying. »Inclusion drives our culture of innovation and collaboration« is written as an equation: **»Diversity + Collaboration = Great Innovation«** — and an equation can be tested. It holds when a **lead engineer** in Västerås asks a colleague in Vaasa for a review before the deadline, not after. **»Safety and integrity«**, **»taking responsibility for your own actions while caring for your colleagues and the business«**, is the leadership I practised in 24/7 operations, where the shortcut is always available and never acceptable. **»We push boundaries, we break records and we never give up«** is the culture; what makes it survive three countries is that processes exist to **»capture and share best practices«**, that **»developing people, driving performance, and taking ownership«** is spent on people, that **»zero harm«** and **Diversity 360** carry numbers, and that a **»life-long learning culture«** has a matrix behind it rather than a poster. That is how **»high-quality engineering delivery«** and **»customer commitments«** become one conversation inside a company **»advancing a sustainable energy future for all«** and working towards **»abundant, secure, affordable, and sustainable electricity for all«**.

Practical. I live in Måløv, fifteen minutes from the **Ballerup** office, so Denmark is my base and I would travel to Vaasa and Västerås as a fixed part of the month. Danish and **English** fluently, not Finnish or Swedish — the working language would be English, and I am used to technical documentation and negotiation in it. Available after notice. What I would want to understand first is how lead engineers are allocated today: by country, by project or by competence.

Kind regards

Shahram Ajloo

SHAHRAM AJLOO

Engineering Manager · lead engineers, three countries

+45 93 99 95 14 · ajlooshahram@gmail.com · linkedin.com/in/shahramajloo · Måløv, Denmark

PROFILE

Engineering and operations leader — authorised **LV/MV/HV** engineer, B.Tech in Technology Management and Mechanical Engineering (7.6/12). Twenty years in electrical engineering, operations and project delivery. Led **25 specialists** across **37 parallel capital projects**, **14 employees plus subcontractors** on **11 simultaneous site projects**, and an **8-person company with full P&L** since 2023. Built competence matrices, standards and KPI routines; cut energy consumption by **more than 40 per cent** in a 24/7 plant.

SWITCHYARD — ENGINEERING DELIVERY ACROSS SITES AND COUNTRIES

- **Lead engineers and specialists:** Led 25 specialists across 37 parallel capital projects in a regulated plant, with engineering, procurement and site organisations as counterparts; every interface named in a matrix with an owner and a date.
- **Capacity and resource demand:** Capacity management daily: analysis each morning, re-prioritisation the same day and one plan for 11 simultaneous site projects with 14 people and subcontractors.
- **Standards, competence and succession:** 5S, standard work and PDCA in a workshop and in 24/7 operations; competence matrix per team with a succession behind critical roles — 12 technicians and 3 apprentices trained to a written standard.
- **Quality and delivery:** 37 capital projects at DKK 2-10m each with zero critical deviations at handover under GMP/FDA/EMA; KPI reporting monthly with deviation explanations to management and client.
- **High voltage and energy:** Five years of high voltage switchgear, protection and switchgear operation in a 24/7 plant; over 40 per cent lower energy consumption through measurement and re-commissioning.

PROFESSIONAL EXPERIENCE

Owner / Technical Director — ELOHVAC ApS · Copenhagen · May 2023 – present

Scope: 5 electricians and 3 apprentices · full P&L · electrical contracting

- **Engineering, customers and economics:** Tenders and cost calculation, change management, quality, commissioning and schedule; safety with risk assessment, LOTO and safety walks.

Co-owner and CTO / Technical Head of the AI department — Data Power Consultant ApS · Copenhagen · 2024 – Nov 2026 (in parallel with ELOHVAC)

Scope: 4-10 people · technical and industrial applications

- **Engineering management with AI:** Technical applications for industrial clients, AI-assisted design workflows and AI in management reporting, decision briefs and KPI analysis; the company has closed.

Senior Commissioning Engineer / Project Manager, Electrical Systems — Novo Nordisk A/S · Kalundborg / Bagsværd · Nov 2022 – Jul 2024

Scope: 37 parallel capital projects · 25 specialists · GMP/FDA/EMA

- **Specification, delivery and handover:** Requirement specifications, FAT/SAT and IQ/OQ/PQ; deviations closed with name and date, no critical findings at handover.

Project and Workshop Manager — Ventek-Air · Copenhagen · Jan 2022 – Nov 2022

Scope: 14 employees · 11 simultaneous site projects

- **Schedule, capacity and subcontractors:** Daily board meeting, capacity analysis and same-day re-prioritisation; subcontractor interfaces and handover packages.

Operations and Maintenance Manager — Biofos (Lynetten) · Copenhagen · Aug 2017 – Jan 2022

Scope: 24/7 treatment plant · pumps, high voltage switchgear, SCADA

- **Operations, standards and energy:** Maintenance and modification in live operation; over 40 per cent lower energy consumption; 5S and safety practice introduced as standard.

Electromechanical Technician / Production Team Leader — ARJ Engineering · Tehran · Dec 2003 – Mar 2010

Scope: 12 technicians · machine workshop · fleet and equipment

- **Workshop, equipment and training:** Fault diagnosis, calibration and repair; procurement and maintenance of machines and vehicles; training and target follow-up for 12 technicians.

EDUCATION AND AUTHORISATION

B.Tech, Technology Management and Mechanical Engineering · Copenhagen School of Marine Engineering and Technology Management · 2017-2022 · GPA 7.6/12

Authorised LV/MV/HV engineer (elautoriseret maskinmester) · Danish Safety Technology Authority · May 2023

Refrigeration and ventilation technology · vocational (AMU) · Mercantec 2021 · STCW, Danish Maritime Authority 2021

Electrical and Mechanical Design, Electrical Engineering · Tehran Technical University · 2000-2003 · EQF 6

LANGUAGES, IT AND PRACTICAL

Danish (native) and **English** (professional, written and spoken) · Persian (native) · **IT**: ERP-based project and finance systems, CMMS, Excel and own **Python** tools for **KPI**, checklists and reporting; familiar with BIM-based project collaboration and IEC documentation practice · **Driving licence B and own car** · Måløv, 15 minutes from the **Ballerup** office; travel to **Vaasa** and **Vasteras** accepted · Available after notice.

THE POSTING'S REQUIREMENTS — WHAT I HAVE

Requirement	Evidence
Lead the Project Management Engineering lead engineers team across Finland, Sweden and Denmark	Led specialist teams and their leaders for twenty years: 25 specialists across 37 projects, 14 employees on 11 site projects, 8 employees in my own company.
Regular travel between our offices and leading employees based across all locations	Two years of weekly commuting to a plant 110 km from home, and teams spread over several sites with one plan, one board and a fixed weekly rhythm per location.
Provide strategic leadership	Direction set as three goals per quarter rather than thirty, translated into monthly KPI follow-up with named owners.
Develop and empower your team	Competence development through a competence matrix, appraisal cycles, 1:1s and a delegation ladder; 12 technicians and 3 apprentices trained to a written standard.
Ensure high-quality engineering delivery that meets business requirements and customer commitments	37 capital projects with zero critical deviations at handover; customer commitments tracked as delivery milestones in every monthly report.
Work closely with cross-functional teams to drive performance	Engineering, procurement, site and client organisations in one cross-functional meeting series with one decision log — in 37 projects and in my own company.
Strengthen engineering capabilities	Standards for documentation and interface control written with the engineers who use them; 5S and standard work introduced on a workshop floor and in 24/7 operations.
Contribute to the development of innovative customer solutions	Customer solutions from requirement to handover in 37 projects; today also AI-assisted design and calculation workflows in my own company.
Collaborate with other departments to manage supplies from an engineering perspective	Interfaces to procurement and suppliers named in a matrix in every project; supplier deliveries followed weekly against schedule.
Analyse resource demand for capacity management	Capacity management daily in 11 simultaneous projects: demand per competence, re-prioritisation the same day, rolling plan.
Develop team priorities and set goals for team members to achieve operational results	One board per team with three priorities and an owner each; performance goals tied to the board and reviewed monthly, with an appraisal and development plan for every employee.
Build operational capacity through people management and deploy the necessary frameworks	Grew a company to 8 employees and a workshop to 12 technicians, with recruitment, training and succession planned early; frameworks for quality, safety and documentation built from scratch and introduced into a GMP organisation.

Ensure processes and tools are in place to capture and share best practices	Every project closed with three written improvements entering the standard, shared at a fixed agenda item; processes plus tools I built myself — checklists, KPI dashboards and Python reporting used daily by the teams.
Ensure policies, practices and procedures are understood and followed	Compliance as a management routine: audits, safety walks and deviation handling with name and date — zero critical findings at handover.
Develop the team and build the capacity required by the strategic plan	Development plans aligned to what the organisation needed next, not what was convenient; two technicians moved into leading roles.
Bachelor of Engineering or equivalent relevant professional experience	B.Tech in Technology Management and Mechanical Engineering (GPA 7.6/12), authorised LV/MV/HV engineer and twenty years of professional practice.
Knowledge of substation technology AIS and GIS	Not a substation designer: my high-voltage experience is switchgear, protection and operation in a 24/7 plant, plus twelve years in the energy sector. AIS and GIS would be learned from your lead engineers.
Communication, negotiation and interpersonal abilities	Negotiation with clients, subcontractors, suppliers and internal stakeholders for twenty years; briefs of one to two pages and minutes with name and date, in Danish and English.
Strategic mindset combined with strong problem-solving capabilities	Strategy translated into measurable routines; problem-solving with 5xWhy, Ishikawa and A3, and with data before opinion.
Previous experience in the energy sector	Twelve years in energy and utilities: a 24/7 treatment plant, a pharma capital programme and an electrical contracting company since 2023.
Fluency in English, both written and spoken	English as working language for documentation, FAT/SAT and supplier negotiation; Danish native, Persian native.
Willingness to work in one of the Hitachi Energy offices in Vaasa, Vasteras, Ballerup or Middelfart	Ballerup is fifteen minutes from my home; Middelfart and travel across the Nordic countries are acceptable, and I would be present where the teams are.

FIRST 90 DAYS

- Visited the three locations, sat with each lead engineer and mapped what they decide today, what they escalate and what nobody owns.
- Built the first capacity view per country and competence, and tested it against the projects already running.
- Chosen two standards to harmonise first — documentation and interface control, with standardisation owned by the engineers who write them, not by the manager.
