30 October 2026

Thermo Fisher Scientific · Roskilde, Denmark · Hiring Manager, Operations · Job ID R-01372520 · Fully onsite

Application: Operations Supervisor, Day — Roskilde (R-01372520)

A regulated site is not run from a meeting room. It is run at 07:00, at the tier-1 board, where the shift agrees what is true today: which line is running to standard, which deviation is still open, which material is not at the line, and who owns each countermeasure before the next huddle. Your posting describes that responsibility precisely — daily production operations, quality and safety standards, team development and continuous improvement inside a strict GMP and FDA framework, supported by PPI. That is the operation I have been running for twenty years, and the system for it here is already built:

Roskilde is real production, highly automated, with PPI as the way work is improved. The first ninety days follow that order: week one on the floor and at the boards, day thirty with tiered daily management and escalation live, day ninety with gains that hold without me standing next to them.

- **Running the day.** Tiered huddles, visual boards for Safety, Quality, Delivery, Inventory and Productivity, named owners, escalation inside the shift and Gemba walks that end where the problem is. That cadence has run over 37 concurrent CAPEX projects worth DKK 2–10m each, a 14-person production team and 25 specialists — with deviations caught in hours, not at month-end.
- **Improving the day.** Lean manufacturing and process improvement are my working method, in PPI's own logic: 8-step problem solving and A3, Kaizen events and Just-Do-It actions, value stream mapping, standard work, 5S, visual management, SMED, TPM and Poka-Yoke — root cause before countermeasure, ownership fixed by RACI. Results I can defend: +40% productivity in a technical service operation and –40% energy cost in regulated production.
- **Protecting the day.** Quality is documentation you can audit years later: SOP and batch record discipline, deviation and CAPA, change control, clean room and gowning behaviour, FAT/SAT and IQ/OQ/PQ. At Novo Nordisk that closed with zero critical findings at handover under GMP/FDA/EMA; in 24/7 critical operations it kept the plant running without unplanned stops.
- **Safety before output.** LOTO, risk assessment, safety walks and toolbox talks mean little without near-miss reporting followed to closure and a stop-the-line right people actually use. In my operations that is measured like every other KPI: an unsafe shift is a failed shift, whatever the output.
- **The team around the line.** Situational leadership, GROW coaching, SBI feedback, 1:1s and development reviews, competence matrices, 30-60-90 onboarding and structured operator and apprentice training — with the psychological safety that makes the near-miss get reported. I have built teams of 5 to 25 in two countries; capable people who stay are the only sustainable capacity plan.
- **Across functions and systems.** Cross-functional work is deliberate: daily interfaces to Quality, Engineering, Supply Chain and Finance on one shared plan and written follow-up; SAP ERP and CMMS as the source of truth, Power BI and Office for the boards — plus my own tooling as a professional, active Claude coder (Python, Claude API): shift dashboards, OEE and capacity models, investment models for development and new business ideas. The supervisor belongs on the floor.

Against your requirements: 20+ years in operations management (5+ required), leading teams of 5–25 since 2003 (2+ required) · Lean and continuous improvement as a daily system, not a certificate · problem-solving, decision-making, organizational skills, time management proven in 24/7 critical operations · clear written and verbal communication, strong interpersonal skills, Danish and English · ERP (SAP), Office, Power BI · clean rooms, warehouses, manufacturing · safety and regulatory compliance, GMP/FDA quality management systems from Novo Nordisk.

Two things, plainly. My supervisory years are in technical production, maintenance and project operations inside GMP — I have owned the daily management system, the people and the compliance, but not yet a moulding or filling line; that product flow I will learn in weeks, because the system around it is the one I already run. And my written English is professional, not native: boards, records and reviews I produce are concise and audit-ready — better to say that than have it found out in week two.

Why Thermo Fisher Scientific, and why Roskilde. PPI is the most complete version of what I already practise: 8-step problem solving, tiered accountability, Gemba, standard work, a project funnel and a bronze-to-gold maturity model, with supervisors trained in Leading Through PPI — improvement as a system, not a series of campaigns. The 4i Values read like an operating standard I recognise: Integrity as open communication and honoured commitments, Intensity as speed with excellence, Innovation as turning knowledge into something measurably better for the customer, Involvement as one team that listens. A site among the most automated in the world, where you can see the production from your desk, is where a supervisor moves a number — and the mission is the one I already work under.

Practical: day shift, fully onsite in Roskilde, start at short notice; on appointment I wind down my own company, so there are no competing commitments. Driving licence B, easy commute from Måløv. I would welcome a conversation about where the next twelve months of improvement should land.

Sincerely,

Shahram Ajloo

SHAHRAM AJLOO

Operations Supervisor · Lean / Operational Excellence (PPI) · GMP-Regulated Manufacturing

+45 93 99 95 14 · ajlooshahram@gmail.com · linkedin.com/in/shahramajloo · Måløv, Denmark (commutable to Roskilde)

PROFILE

Operations and production leader with 20+ years in regulated manufacturing — pharmaceutical and technical production — with leadership responsibility since 2003 for teams of 5 to 25 and full P&L; accountability. Runs daily management the way PPI expects it — tiered huddles, SQDIP boards, Gemba, escalation paths, A3 and 8-step problem solving, standard work — and develops people through situational leadership, coaching and competence matrices. Documented results: +40% productivity, –40% energy cost, zero critical deviations at handover under GMP/FDA/EMA. Professional and active Claude coder: builds the dashboards, OEE and capacity models and investment models the operation runs on. B.Tech in Technology Management & Mechanical Engineering (EQF 6); authorised electrical engineer LV/MV/HV; Danish native, English professional.

AREAS OF EXPERTISE

- **Lean & operational excellence:** PPI 8-step problem solving · A3 · Kaizen events & Just-Do-It · value stream mapping · standard work · 5S & visual management · tiered daily management · Gemba walks · SMED · TPM · Kanban/WIP · Poka-Yoke · Ishikawa & 5 Why · FMEA · DMAIC/Six Sigma tools · Toyota Kata · Yokoten · SQDIP, OEE, OTD, MTBF/MTTR · RACI, escalation ladders, countermeasure tracking to closure.
- **Quality, compliance & EHS:** GMP/cGMP and FDA expectations · quality management system and ISO 13485 · medical device and pharmaceutical manufacturing · regulated manufacturing · SOP and batch documentation · deviation handling, CAPA and change control · audit readiness and inspection support · FAT/SAT, IQ/OQ/PQ · clean room and gowning discipline · risk assessment (APV) · LOTO · near-miss reporting to closure · toolbox talks and safety walks · IMS.
- **People, systems & business:** Situational leadership (SLII) · GROW coaching · SBI feedback · 1:1s, performance and development reviews · competence matrices and individual development plans · organizational skills and time management · 30-60-90 onboarding · operator and apprentice training · psychological safety · change leadership · SAP ERP · CMMS · Microsoft Office/Power BI · Python/Claude API (OEE, capacity, investment NPV/IRR models) · P&L;, budget and cost control.

SELECTED ACHIEVEMENTS

- Zero critical deviations at handover across 37 concurrent CAPEX and plant projects (DKK 2–10m each) under GMP/FDA/EMA — delivered with deviation handling, CAPA and change control in a live audit trail.
- +40% productivity in a technical service operation through data-driven planning, standard work and self-built AI tooling; the same operation reported response time, first-time quality and delivery daily instead of monthly.
- –40% energy cost in regulated production through a structured PDCA programme with A3 problem solving and standardised work — improvement sustained after the project team disbanded.
- Tiered daily management introduced in three operations, replacing month-end reporting with visual boards, named countermeasures and same-shift escalation.
- Teams built and developed across two countries — 25 specialists, a 14-person production team, a 12-person workshop and 5 electricians with 3 apprentices — with competence matrices and individual development plans.
- Reporting automated with SAP ERP, CMMS, Power BI and Python/Claude API, removing manual consolidation from the shift and freeing supervisor time for the floor.

PROFESSIONAL EXPERIENCE

Owner / Technical Director / Authorised Electrical Installer

ELOHVAC ApS · Copenhagen, Denmark · May 2023 – Present

Scope: Full P&L; · 5 electricians + 3 apprentices · service and installation operations

- Own daily operations end to end: production planning, capacity against the order book, material and spare-part flow, quality control, on-time delivery and cost — reviewed every morning against standard work, 5S, visual boards and KPI follow-up on response time, first-time quality and delivery.
- Supervise and develop 5 electricians and 3 apprentices: daily planning, 1:1s and performance reviews, competence matrix, safety follow-up and structured training across shifting sites and priorities.
- Built the digital backbone myself — ERP-based order and spare-part control, Power BI dashboards, and Python/Claude API tools for planning, quotations, checklists and reporting.
- EHS and compliance: risk assessment at every new site, LOTO, near-miss handling, documented service records; zero critical deviations in the service portfolio.

Senior Commissioning Engineer / Project Manager, Electrical Systems

Novo Nordisk A/S · Kalundborg / Bagsværd, Denmark · Nov 2022 – Jul 2024

Scope: 37 concurrent CAPEX projects (DKK 2–10m each) · 25 specialists · GMP/FDA/EMA

- Coordinated 37 concurrent CAPEX and plant projects across engineering, procurement and site operations: schedule, cost, risk, resources and monthly reporting to management and client.
- Led 25 highly specialised colleagues cross-functionally in clean room areas, warehouses and manufacturing: work permits, LOTO and gowning discipline, with commissioning and qualification (FAT/SAT, IQ/OQ/PQ), deviation handling, CAPA and change control — zero critical findings at handover.
- Delivered –40% energy cost through a structured PDCA programme with A3 problem solving and standard work; SAP ERP for cost, asset and order control.

Project and Workshop Manager, Ventilation & Climate
Ventek-Air · Copenhagen, Denmark · Jan 2022 – Nov 2022
Scope: 11 concurrent projects (DKK 2–10m) · 14-person production and assembly team

- Daily leadership of a 14-person production and assembly team: capacity planning, flow control and delivery performance from specification to formal handover.
- Introduced daily huddles and bottleneck analysis; standardised work at every station with a marked lift in delivery performance and first-time quality.
- Managed suppliers and subcontractors, contract basis, safety documentation and handover packages.

Maintenance and Operations Manager / Workshop Technician
Biofos (Lynetten) · Copenhagen, Denmark · Aug 2017 – Jan 2022
Scope: 24/7 critical operations · pumps, HVAC, HV switchgear, SCADA · IMS

- Ran critical electrical and mechanical operations with zero tolerance for unplanned stops: uptime, preventive maintenance and fast fault-finding around the clock.
- Introduced structured maintenance routines (standard work, 5S), PDCA-based preventive maintenance and root cause analysis (A3); owned spare-part flow and stores for critical operations.
- Shift operations with safety discipline: LOTO, risk assessment, near-miss reporting and toolbox talks; KPIs and operations budgets in SAP ERP.

Electromechanical Technician / Production Team Leader
ARJ Engineering · Tehran, Iran · Dec 2003 – Mar 2010
Scope: 12-person production team · machine workshop

- Led a 12-person production team: shift planning, material control, target management and situational coaching.
- Diagnosed and repaired industrial electrical and mechanical systems using structured root cause analysis and corrective action.

EDUCATION

- B.Tech (EQF level 6), Technology Management & Mechanical Engineering — Copenhagen School of Marine Engineering & Technology Management, 2017–2022 · GPA 7.6/12 (ECTS).
- Electrical & Mechanical Design, Electrical Engineering (EQF level 6) — Tehran Technical University, 2000–2003.
- Upper secondary (HF, mathematics/physics) — VUC, 2012–2017.

CERTIFICATIONS AND TRAINING

- Danish electrical authorisation LV/MV/HV — Danish Safety Technology Authority, May 2023.
- Lean practice: 5S, PDCA, value stream mapping, A3 and Kaizen.
- Refrigeration & HVAC technology (AMU) — Mercantec, 2021.
- STCW: engine-room watch (A-III/1), designated safety duties (VI/6), ship security officer (VI/5), security awareness (VI/6-1), tanker basic (V/1-1, V/1-2) — Danish Maritime Authority, 2021–2023.

LANGUAGES AND PRACTICAL

- Danish (native) · English (professional, written and spoken) · Persian/Farsi (native) · Driving licence B
