4 November 2026

H.Essers · Warehousing, Ringsted · Operations Manager

Application: Operations Manager — Ringsted

Dear Hiring Team

A warehouse like Ringsted is judged on five things, and none of them are visible from the office. Orders that leave complete and on time — the OTIF number. Stock records that match what is on the rack when a customer asks. Temperature, dangerous goods and safety handled without a single deviation. A cost per unit that holds when volumes move. And customers who renew because the operation did what it promised in the tender. The Operations Manager role is to make those five true on every shift, and to build a team that keeps them true when the site doubles in size.

The operating rhythm I would run is deliberately boring. A daily tier board at the start of each shift with five numbers on it — orders shipped versus plan, lines picked per hour, stock accuracy, open deviations and near-misses — reviewed in ten minutes with the shift leads, and escalated by exception to me rather than in a long meeting. A structured handover between shifts so nothing lives only in one person's head. A Gemba walk with the shift lead every morning, because the floor tells you about a blocked dock before the report does. And a deviation and CAPA routine where every incident gets a root cause with A3 and 5 Whys, a named owner, a deadline and a check that the fix actually held.

Around that sit the things that decide whether the site makes money: a KPI tree that ties the floor numbers to the customer contract — cost per order, cost per pallet, overtime share, absence, and throughput per labour hour — so improvement work is chosen where it moves the P&L and the profitability of each customer contract, not where it is easiest. A capacity plan that looks twelve weeks ahead at the ramp-up the site is heading into. A continuous improvement funnel with a limited number of active projects, each with a business case and a measured effect. And quarterly reviews with each customer where we show the numbers before they ask, because that is what turns an operation into a partnership.

What I bring is the combination the role needs: P&L ownership, site leadership in regulated production, and a working knowledge of what GxP actually demands. At Novo Nordisk I worked under GMP, FDA and EMA requirements across 37 parallel capital projects with 25 specialists — documented acceptance criteria, FAT/SAT and IQ/OQ/PQ, deviation handling and zero critical findings at handover. At Biofos I ran maintenance and operations on a 24/7 plant with spare-parts and warehouse flow, 5S and standard work, LOTO, risk assessment and APV as daily routines, and shift patterns that included nights and weekends. For the past three years I have run my own company with full P&L, quoting, pricing, margin follow-up and service agreements measured on response time and quality — which is the closest thing to a customer contract with a penalty clause that a small business offers.

I will be straight about the gap: I have not run a third-party logistics site with a customer portfolio of this kind, and my warehouse experience comes from spare-parts and materials flow inside regulated operations rather than from high-volume pick-and-pack. What I do have is site accountability in a regulated environment, a way of working that produces numbers rather than narratives, and fifteen years of leading shift-based teams. The first ninety days are therefore a learning plan with dates: weeks 1–2 on the floor in every function and every shift, including a weekend; day 30 with a baseline of the five tier-board numbers and a signed-off picture of contract obligations per customer; day 60 with a prioritised improvement funnel, a stock accuracy routine and a safety plan for the phase-2 expansion; day 90 with measured movement in at least two of the five numbers and a development plan for every shift lead.

What drew me to H.Essers is that the Ringsted site is not a mature operation being polished — it is a site being built, with healthcare and chemicals in temperature-controlled space, dangerous goods approvals, and a second phase that will multiply the footprint. That is a leadership job more than an administration job. And the values you describe fit how I prefer to work: **family values** since 1928 mean people are not a line in the budget; **Lifelong Learning** and the Academy match the way I have always developed apprentices and shift leads; **innovation** and "It's transpossible" only mean something if someone tests the idea on the floor and measures whether it worked; and **diversity and inclusion** show in who gets trained, who gets the good shifts and whose idea is tried.

Practically: I live in Måløv, about 50 minutes by car from Ringsted, so no relocation is needed. I speak Danish natively, English professionally and Persian, which helps in a site with international customers and colleagues. I am also an active Claude coder and build my own Python tools for KPI follow-up, capacity models and investment cases with NPV, IRR and scenarios — useful when a new customer or a new warehouse phase has to be priced before it is signed.

I would like to come to Ringsted and walk the site with you — the docks, the temperature zones and the dangerous goods area — and talk through how I would run the first ninety days and where I see the biggest operational gains in the current setup.

Kind regards

Shahram Ajloo

Operations leadership · GxP discipline, site performance and customer P&L

+45 93 99 95 14 · ajlooshahram@gmail.com · linkedin.com/in/shahramajloo · Måløv, Denmark

PROFILE

Operations leader with 15+ years from regulated production, technical service and projects — strategic and operational responsibility, full P&L ownership, site accountability on a 24/7 plant, and cross-functional leadership of 25 specialists. Works from a daily tier board and a small set of KPIs, with GxP documentation, deviation handling and safety routines as a matter of course rather than a project. Builds his own Python and Claude tools for KPI follow-up, capacity planning and business cases.

OPERATIONS AND RESULTS

- **P&L and commercial ownership:** Full P&L in his own company since 2023: quoting, pricing, margin follow-up, service agreements measured on response time, quality and delivery, and direct negotiation with commercial and industrial customers.
- **Site and shift leadership:** Maintenance and operations leadership on a 24/7 plant with shift patterns including nights, weekends and public holidays; daily board meetings, bottleneck analysis and standard work routines.
- **GxP and quality systems:** 37 capital projects under GMP/FDA/EMA with 25 specialists: documented acceptance criteria, FAT/SAT, IQ/OQ/PQ, deviation and CAPA handling — zero critical findings at handover.
- **Stock and flow discipline:** Spare-parts and warehouse flow with cycle counts, 5S on storage areas, receiving routines and deviations closed with owner and deadline. SAP ERP for materials, assets and cost follow-up.
- **Continuous improvement:** 5S, standard work and PDCA in daily use; a PDCA programme reduced energy cost by 40 %. A3 and 5 Whys as the default for root cause, with the countermeasure verified afterwards.

TOOLS AND METHODS

Task	Tool and documented use
Daily performance management	Tier board with five metrics per shift (shipped vs. plan, productivity, stock accuracy, open deviations, near-misses), structured shift handover and escalation by exception. Used in workshop, plant and projects.
People management and leadership	Situational Leadership (SLII), delegation ladder, 1:1s every two weeks, performance reviews, GROW and SBI feedback, competence matrix and cross-training plan. Apprentices trained to final trade test.
Quality and compliance	Deviation and CAPA handling, A3 root cause, 5 Whys and Ishikawa, document control and audit readiness. FAT/SAT and IQ/OQ/PQ under GMP; zero critical findings at handover.
Safety and environment	LOTO, risk assessment, APV/workplace assessment, near-miss reporting, toolbox talks and safety walks. Applied daily on a 24/7 plant and in contractor-heavy projects.
Continuous improvement	PDCA, 5S, standard work, VSM, Kaizen and a limited project funnel with business case and measured effect. Cost per unit and labour productivity as steering numbers.
Customer and stakeholders	Customer reviews on their numbers, stakeholder mapping and RACI, written decisions with owner and deadline. Investment cases with NPV, IRR and scenarios for new business and capacity.

EXPERIENCE

Owner / Technical Director — ELOHVAC ApS · Copenhagen, Denmark · May 2023–present

Scope: 5 electricians and 3 apprentices · full P&L · commercial and industrial customers

- **Commercial ownership:** Quoting, pricing, margin follow-up and service agreements with response time, quality and delivery as KPIs; direct customer dialogue on needs, scope and cost.
- **People and safety:** Daily planning, 1:1s, performance reviews, coaching and motivating a shift-based team, competence matrix, apprentice training, LOTO, risk assessment and APV at every site start.
- **Digital tools:** Python and Claude API for quotations, schedules, quality checklists and KPI dashboard; productivity gain above 40 % in the business.

Senior Commissioning Engineer / Project Manager, electrical systems — Novo Nordisk A/S · Kalundborg / Bagsværd, Denmark · Nov 2022–Jul 2024

Scope: 37 parallel capital projects · 25 specialists · DKK 2–10m per project · GMP/FDA/EMA

- **GxP and interfaces:** Progress, cost, risk and resources across engineering, procurement and operations; documented acceptance criteria and audited handover throughout.
- **Performance and improvement:** FAT/SAT and IQ/OQ/PQ with zero critical deviations at handover; A3 and 5 Whys in fault finding; a PDCA programme cut energy cost by 40 %.

Project and Workshop Manager — Ventek-Air · Copenhagen, Denmark · Jan 2022–Nov 2022

Scope: 14 employees · 11 parallel construction projects · DKK 2–10m each

- **Throughput and flow:** Tenders, quotations, subcontractors and handover packages. Daily board meetings and bottleneck analysis plus standardised working routines lifted delivery performance.

Maintenance and Operations Manager / Workshop Technician — Biofos, Lynetten · Copenhagen, Denmark · Aug 2017–Jan 2022

Scope: 24/7 operations · warehouse and spare-parts flow · shift work including nights and weekends

- **Stock, storage and routines:** Receiving and spare-parts flow with cycle counts, 5S on storage areas and min/max levels; preventive maintenance planned from SCADA data.
- **Safety and standards:** LOTO, risk assessment, APV and near-miss reporting in shift operations; standard work and PDCA on the workshop and store.

Electromechanical Technician / Production Team Leader — ARJ Engineering · Tehran, Iran · Dec 2003–Mar 2010

Scope: 12 mechanics and technicians · machine workshop

- **Planning and targets:** Shift planning, material control and target follow-up; fault diagnosis, root-cause analysis and corrective actions on industrial equipment.

EDUCATION AND CERTIFICATION

B.Tech, Technology Management & Mechanical Engineering · Copenhagen School of Marine Engineering & Technology Management · 2017–2022 · EQF 6 · GPA 7.6/12

Authorised marine and electrical engineer (LV/MV/HV) · Danish Safety Technology Authority · May 2023

Electrical and mechanical design, electrical engineering · Tehran Technical University · 2000–2003 · EQF 6

Lean practice: 5S, PDCA, VSM, A3, Kaizen · Ongoing courses and daily application in operations

Refrigeration and air conditioning · STCW safety and engine-room watch · Mercantec 2021 · Danish Maritime Authority 2021–2023

LANGUAGES, PRACTICAL AND REFERENCES

Danish and Persian: native · English: professional, written and spoken · Driving licence B · Lives in Måløv, about 50 minutes by car from Ringsted; relocation not required · Available for shift-based site leadership, including early starts and weekend cover when the operation needs it · References from Novo Nordisk and Biofos on request.

WHAT THE ROLE ASKS FOR — MY EVIDENCE

Requirement	Evidence
Full P&L ownership of operations and customers	Full P&L in his own company for three years — pricing, margin and profitability per customer, cost control and service agreements with penalty-style performance terms.
Supply chain or warehousing experience, +5 years, ideally GxP	Five years in regulated operations with warehouse, storage and spare-parts flow; two years in a GMP/FDA/EMA environment with audited handovers. High-volume pick-and-pack is new to me.
Translating the strategic vision into actionable plans	Ran 37 capital projects and 11 construction projects in parallel with documented plans, decision points and reported effect; annual plans and 90-day plans as a standard tool.
KPI monitoring, returns and continuous improvement	Tier boards, OTD and productivity follow-up, deviation and CAPA routines, A3/PDCA with verified countermeasures; 40 % reduction in energy cost through PDCA.
A safe and high-performing work environment	LOTO, APV, risk assessment and near-miss reporting in daily use on a 24/7 plant and in contractor-heavy projects; accident and deviation follow-up with named owners.
Building customer relationships and new business opportunities	Trust-based customer relationships from three years of direct commercial dialogue, quotations and renewals; stakeholder mapping and written agreements. New business with NPV/IRR cases.
Motivate, coach and develop teams to the next level	Personal leadership of 5 electricians and 3 apprentices; 25 specialists and a 14-person team without formal authority; SLII, 1:1s, reviews, competence matrix and cross-training.
Proactive, hands-on, challenging the status quo	Rebuilt working routines at workshop, plant and project level; introduced Python/Claude tools where spreadsheets were the norm — innovative, but measured and with a documented productivity effect.

FIRST 90 DAYS — SITE, CUSTOMERS, NUMBERS

Period	What happens, and how it is measured
Week 1–2	On the floor in every function and on every shift, including one weekend: goods-in, put-away, picking, packing, dispatch, returns and the temperature and dangerous-goods areas. A short 1:1 with each shift lead and with the customer-facing roles. Systems walk-through: WMS, TMS and the customer portal.
Day 30	Baseline of the five tier-board numbers on one page. Contract obligations per customer written down (service levels, cut-off times, temperature ranges, reporting). Open issues from the last six months collected and classified: capacity, quality, systems or people.
Day 60	Prioritised improvement funnel agreed with site and regional leadership: at most five active projects, each with an owner, a business case and a measure. Stock accuracy routine with rolling cycle counts in place. Safety plan for the phase-2 expansion and the dangerous goods area.
Day 90	Measured movement in at least two of the five numbers, a customer review held on our own numbers rather than theirs, and a development plan per shift lead with cross-training mapped against the ramp-up. Written handover of what works, so the rhythm does not depend on me being in the building.

THE OPERATING RHYTHM I WOULD RUN

Daily, weekly, monthly — three rhythms, no more. Daily: tier board and handover per shift, Gemba walk with the shift lead, deviations raised and owned the same day. Weekly: stock accuracy check, labour efficiency and overtime review against the volume forecast, and a short improvement stand-up where the five projects report one number each. Monthly: customer numbers sent before the review, cost per order and per pallet closed, safety statistics and near-miss trend, and one page to the regional organisation. Anything that cannot be read in ten minutes does not belong on the board.

GxP, GDP AND SAFETY IN ONE SYSTEM

In healthcare and chemical logistics, quality and safety are not two parallel tracks — they are the same routine seen from two angles, and operational excellence is what you get when both hold. Documented procedures, trained operators, temperature monitoring with alarms and defined responses, segregation and handling of dangerous goods, deviation and CAPA with verified effectiveness, change control before anything is altered, and audit readiness every day rather than the week before an inspection. I have worked this way under GMP, FDA and EMA, where a missing signature stops a handover, and I would rather spend an hour on the routine than a week on the finding.

CUSTOMERS AND COMMERCIAL GROWTH

A third-party site grows in two ways: the customers you have give you more volume, and the customers you do not have yet believe you can handle theirs. Both are built on the same thing — being able to show, with numbers, what the operation delivered last quarter and what it will deliver next. I would run quarterly reviews on our own data, bring improvement ideas to the customer instead of waiting for complaints, and prepare new business with a capacity and cost model rather than a gut feeling: what does this customer need in square metres, shifts, temperature zones and systems — and what does it earn at the price we can defend. That is also how customer satisfaction becomes sustainable growth instead of a single good quarter.

PEOPLE, LIFELONG LEARNING AND SHIFT CULTURE

Warehouse teams are built on shift leads. If the shift lead cannot run the board, cover an absence and say something difficult to a colleague, the site will always need the manager in the room. So I invest where it shows: a competence matrix with cross-training against the ramp-up plan, a named successor for every key function, 1:1s every two weeks, reviews that end with a concrete next step, and internal promotion before external hiring where the potential is there. The Academy and the Lifelong Learning vision are useful only if the training plan is tied to what the site actually needs next year — otherwise it is a catalogue.

DIGITAL AND AI IN A WAREHOUSE CONTEXT

I am an active Claude coder and build my own tools in Python: KPI follow-up pulled together from several sources into one page, capacity and labour models against a volume forecast, and investment cases with NPV, IRR and sensitivity for a new customer or a new warehouse phase. On a site this size, that is the difference between a two-day exercise and a two-hour one when a customer asks a question — and it lets the shift leads spend their time on the floor instead of in spreadsheets.
